

Hello Berwyn Rain Barrel Recipients,

The time is approaching to winterize your rain barrels, before temperatures drop below freezing. To fully protect rain barrels and prevent ice formations in and around the barrel area, the Metropolitan Water Reclamation District (MWRD) highly recommends that every rain barrel be properly winterized. This means draining, disconnecting, flipping upside down, and storing the rain barrels in the garage or basement. Proper maintenance and storage will prevent the barrel from cracking and uphold the 1-year warranty.

I hope you have an enjoyable Autumn.

Sincerely,

City of Berwyn Engineering Department
