 - a. Crash Data (2007-2015)
 - b. Annual Average Daily Traffic
 - c. Signal Maintenance Transfer (2009-2015)

1. Summary

As indicated in the RLR policy, an evaluation report shall be prepared by the permit applicant one year after RLR camera installation and every three years thereafter.

The City of Berwyn has been in compliance with the RLR policy laid out by the Illinois Department of Transportation District 1 Bureau of Traffic Operations.

- Date at which the 1 Year Follow-Up Evaluation Report was submitted to IDOT: **October 2013**
- Date at which the 3 Year Follow-Up Evaluation Report was submitted to IDOT: **September 2017**

The intersection of IL Rt.43 at Cermak Rd is one of the busiest and most dangerous intersections in Berwyn. According to a recently submitted 3 year follow-up report, since the installation of the RLR camera at this intersection in 2011, total number of crashes seemed to be trending slightly up year by year (25 in 2011 -> 27 in 2012 -> 26 in 2013 -> 31 in 2014 -> 36 in 2015).

Under state law, if the analysis for the 36 month period following installation of the system indicates that there has been an increase in the rate of accidents at the approach to the intersection monitored by the system, the municipalities that operate red light running camera devices shall undertake additional studies in compliance with 625 ILCS 5/11-208.6 (k-7).

Thus further analysis was called to determine the actual change of crash rate and to seek for possible cause and severity of the crashes.

In this report, the data from two calendar years (2009 and 2010) before the installation of a red light camera system were compared to the data from four calendar years (2012-2015) after the installation of a red light camera system.

When looking at the changes in crash rate compared to the changes in traffic volume, the data showed some interesting results. It was then necessary to look further into any other factors that may have possibly impacted or affected driving patterns or any driving behaviors that occurred while traveling through the intersection of IL. Rt. 43 and Cermak Rd during the designated time periods. After looking into any additional factors, it was determined that during the 3 years after the installation of the red light camera system there was major construction at the intersection in question. This major construction played a very large role in the crash trend in those years after the installation of the red light cameras.

2. Crash Data

DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in previous years since data prior to 2015 was physically located by bureau personnel.

The table below reflects the available crash data (Appendix a.) for IL Rt. 43 (Harlem Ave) and Cermak Rd (22nd St) from 2007 to 2015 provided by Illinois Department of Transportation (IDOT). All crashes have been divided into four categories: Turning, Rear End, Angle and Others. From this data pool, only 2009 and 2010 data will be considered as the two calendar years before installation and 2012 to 2015 data will be considered as the four calendar years after installation.

	Turning	Rear End	Angle	**Others	Total
*2007	30	16	4	5	55
*2008	17	15	3	4	39
2009	10	12	2	3	27
2010	11	2	4	7	24
*2011	10	10	2	3	25
2012	14	9	4	0	27
2013	13	8	3	2	26
2014	16	11	1	3	31
2015	17	10	1	8	36

*For our analysis, crash data from 2007, 2008 and 2011 have been disregarded.

1. Data from 2007 and 2008: The law regarding the crash reporting threshold for Property Damage Only crashes was amended effective Jan 1, 2009. This change in law precludes comparison of 2009 and later Property Damage Only crashes and Total crashes with such crashes for previous years.
2. Data from 2011: The year RLR camera was installed.

**Crashes involving sideswipe, fixed object, pedestrian, bike and head-on crashes.

Below is the data before and after installation of the combined total crashes. Also included is the average number of crash totals per year:

Average Crash Totals per Year

	Turning Avg.	Rear End Avg.	Angle Avg.	Others Avg.	Total Avg.
2009-10	10.5	7	3	5	25.5
2012-15	15	9.5	2.25	3.25	30

3. Traffic Volume

By substituting previous year's available Annual Average Daily Traffic (AADT) volume for any missing data year, *Total AADT and **Yearly Total Traffic Volume can be calculated. (Appendix b.)

	Harlem Ave North Leg	Harlem Ave South Leg	22nd St East Leg	22nd St West Leg	*Total AADT	**Yearly Total Traffic Volume
2009	34,700	31,800	26,600	26,800	119,900	43,763,500
2010	34,700	31,800	32,600	38,100	137,200	50,078,000
2011	33,600	35,800	32,600	38,100	140,100	51,136,500
2012	33,600	35,800	32,600	38,100	140,100	51,136,500
2013	33,200	29,200	32,600	38,100	133,100	48,581,500
2014	33,200	29,200	30,300	30,100	122,800	44,822,000
2015	30,200	31,200	30,300	30,100	121,800	44,457,000

* Total number of vehicles entering intersection from all direction per day.

** Total number of vehicles entering intersection from all direction per year. (Total AADT x 365 Days)

The average traffic volumes per year of the before and after installation have been driven as below.

Average Traffic Volume per Year

	Total AADT Avg.	Yearly Total Traffic Volume Avg.
2009-10	128,550	46,920,750
2012-15	129,450	47,249,250

4. Construction

Construction and any other road way improvements can dramatically affect traffic flows and driver behaviors. Lane closures, lane changing and merging occur frequently in work zones. Discretionary lane changes are also performed in work zones under conditions where drivers respond to signage, speed reduction, driver’s aggressiveness, entering/exiting work zone areas, avoiding slow moving vehicles or obstructions including flashing arrow boards, cones, barricades and flaggers. Unsure drivers using extreme caution when driving through a construction zone may lead to sudden stops and could very well be a factor in the increase of any type of crashes.

When compiling crash data, IDOT disregards any data from the year that a major road way improvement took place. This includes traffic signal modernization and installation of new RLR camera(s).

The table below lists the periods that the maintenance responsibilities for the traffic signal installation at the intersection were transferred to the contractors for any constructions/ road way improvement projects. (Jan 2009 - Dec 2015)

Please see *Appendix c. for detailed records of signal maintenance transfer provided by IDOT.

Effective Date		Maintained by IDOT	Maintained by Contractor	Permit #	Construction
from	to				
1/26/09	2/22/11	IDOT			None
2/23/11	4/22/12		Meade Electric	1-T-11-0008	Northbound RLR Camera Installation Berwyn
4/23/12	4/6/14	IDOT			None
4/7/14	6/4/15		Meade Electric	1-T-14-0016	East and Southbound RLR Camera Installation North Riverside
				1-T-15-0531	Westbound RLR Camera Installation Berwyn
6/5/15	6/27/15	IDOT			None
6/28/15	9/30/15		H&H Electric	C-91-052-14	Signal Modification

*Any miscellaneous constructions or roadway improvements (ex: Resurfacing) that do not require a transfer of signal maintenance from IDOT were not included in this list.

During the time that the RLR camera has been present at the Northbound approach in Berwyn, multiple construction projects and miscellaneous work have been done at this intersection. Since installation in 2011, there have been 23.5 months in which maintenance of the signal has been under control of a contractor and not under IDOT. More specifically, from 2014-2015 (when crashes made the biggest increase, 26 crashes in 2013 -> 31 in 2014 -> 36 in 2015), 17.5 out of the 24 months were under construction for signal modification and adding additional RLR cameras.

Year	2009												2010												2011												2012												2013												2014												2015											
Month	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12
	Maintenance under IDOT																																				Maintenance under Contractor																																															

Three (3) more RLR cameras from both Berwyn and North Riverside were implemented at this intersection during 2014-2015.

- May 2014: Southbound RLR Camera went live in North Riverside
- Jan. 2015: Eastbound RLR Camera went live in North Riverside
- Apr. 2015: Westbound RLR Camera went live in Berwyn

This invalidates the usage of any 2014 and 2015 crash data leaving less than two (2) year worth of clean data for after installation. No calculations/conclusions should be made from the contaminated data.

5. Conclusion

1. Total Crash Rate Change

From the average crash totals per year and average traffic volume per year, changes in crash rate can be determined.

Average Crash Totals per Year (From Section 2, Crash Data)

	Turning Avg.	Rear End Avg.	Angle Avg.	Others Avg.	Total Avg.
2009-10	10.5	7	3	5	25.5
2012-15	15	9.5	2.25	3.25	30

Average Traffic Volume per Year (From Section 3, Traffic Volume)

	Total AADT Avg.	Yearly Total Traffic Volume Avg.
2009-10	128,550	46,920,750
2012-15	129,450	47,249,250

In comparison to a span of four years of crash rate* after installation over a span of two years of crash rate* prior to installation:

The total crash rate has been increased by 16.83%

	Total Avg.	Yearly Total Traffic Volume Avg.	Crash Rate*	Rate Change**
2009-10	25.5	46,920,750	0.543469574	16.83%
2012-15	30	47,249,250	0.634930713	

* Crash rate per 1,000,000 vehicles entering intersection based on IDOT provided traffic volume.

** $\{(Crash\ Rate\ for\ 2012-15) - (Crash\ Rate\ for\ 2009-10)\} / (Crash\ Rate\ for\ 2009-10)$

2. Other Crash Rates and Severity

Red light running enforcement is expected to reduce right-angle crashes (T-bone/Cross-traffic) by simply reducing improper entry to the intersection when crossing vehicles are present. At the same time, vehicles stopping when red light cameras are present at an intersection may result in an increase in rear end crashes immediately following installation.

Angle crashes at this intersection have been reduced in comparison, while **Rear End** and **Turning** crashes have increased. Shifts in driving habits like these are generally expected in the first year of a new RLR camera system.

Even though it has been more than 4 years since the Northbound RLR camera has been installed, the changes of crash rate in each crash type still show the patterns that you would typically see in the first year of implementing RLR camera program.

The **turning** crash rate has been increased by **41.86%**

	Turning Avg.	Yearly Total Traffic Volume Avg.	Crash Rate	Rate Change
2009-10	10.5	46,920,750	0.223781589	41.86%
2012-15	15	47,249,250	0.317465357	

The **rear end** crash rate has been increased by **34.77%**

	Rear End Avg.	Yearly Total Traffic Volume Avg.	Crash Rate	Rate Change*
2009-10	7	46,920,750	0.149187726	34.77%
2012-15	9.5	47,249,250	0.201061393	

The **angle** crash rate has been decreased by **25.52%**

	Angle Avg.	Yearly Total Traffic Volume Avg.	Crash Rate	Rate Change
2009-10	3	46,920,750	0.063937597	-25.52%
2012-15	2.25	47,249,250	0.047619803	

The **other** crash rate has been decreased by **35.45%**

	Others Avg.	Yearly Total Traffic Volume Avg.	Crash Rate	Rate Change
2009-10	5	46,920,750	0.106562662	-35.45%
2012-15	3.25	47,249,250	0.068784161	

* Some intersection crash types have a higher chance of injuries and fatalities than others. This results from the angle of vehicle impact and speed of collision. Angle crashes account for more intersection fatalities than any other type of red light running crashes. Rear-end crashes, the other prominent type associated with red light enforcement, usually account for a small portion of fatal intersection crashes.

We have also looked at the changes in the % of the crashes involving any injuries and found that there was a **69.43%** increase after the installation.

	*Fatal	*A injury	*B injury	*C injury	Total Injury Crashes	Total Crashes	% of Crashes that involve injuries	Avg.
2009	0	0	2	2	4	27	14.81%	19.91%
2010	0	0	2	4	6	24	25.00%	
2011	0	0	3	3	6	25	24.00%	
2012	0	1	2	7	10	27	37.04%	
2013	0	0	3	6	9	26	34.62%	
2014	0	1	9	1	11	31	35.48%	
2015	0	0	5	5	10	36	27.78%	

***Fatal** – A fatal crash is a traffic crash involving a motor vehicle in which at least one person dies within 30 days of the crash.

A injury – Any injury, other than a fatal injury, which prevents the injured person from walking, driving, or normally continuing the activities he/she was capable of performing before the injury occurred. This includes severe lacerations, broken/distorted limbs, skull injuries, chest injuries, abdominal injuries.

B injury – Any injury, other than a fatal or incapacitating injury, which is evident to observers at the scene of the crash. This includes lumps on the head, abrasions, bruises, minor lacerations.

C injury – Any injury reported or claimed which is not listed above. This includes momentary unconsciousness, claims of injuries not evident, limping, complaints of pain, nausea, hysteria.

3. Conclusion and Recommendation

The long-term goal of the RLR camera enforcement programs such as this one is to increase traffic safety by enforcing red light running ordinances in a transparent and consistent manner for a sustained period. The timing of the traffic signals at this intersection has not been altered, and will never be altered while the RLR camera system is in operation.

At this time, since almost half of the crash data after installation was during some type of modification or disruption to the normal driving behaviors and patterns, it's impossible to accurately evaluate the changes in crash rate and reach any final conclusions on severity and cause of rate changes. Therefore, we are prevented from determining the effectiveness of the RLR camera. This report could have gone further and analyzed each approach singularly but, again, no conclusion could have been reached using tainted data.

It is important to keep a close eye on the crash trends but more of a sample size with normal traffic flows and normal driver behaviors is needed to accurately reach a conclusion on the effectiveness of RLR cameras at Rt.43 and Cermak Rd.

The City of Berwyn can recommend re-painting of stop bars at this time but It is very difficult to come to any other accurate recommendations due to small sample size of available clean data. The City of Berwyn will most likely be able to make a more educated assessment once 2016 and 2017 crash data become available from IDOT.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

Current year and previous year data are not yet complete and are subject to change as more information becomes available. Calendar date selections include data based on the date of the crash. Year selections include data based on the statistical year in which the crash was processed.

The intersection-related field could be incorrect and affect the data on the report.

If a crash occurs between two municipalities, it may be coded to another city/county from what is on the crash report.

Crashes with incomplete location information are not included.

Areas where routes have more than one junction have been known to cause problems in determining accurate locations. Please notify us to verify the data for intersections with more than one junction.

For roadway segments which include the intersection of two routes, the intersection report may need to be run on the other route in order to get all the crashes.

Notes

DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in previous years since data prior to 2015 was physically located by bureau personnel.

b. Annual Average Daily Traffic (AADT) obtained from IDOT's web site at <https://www.gettingaroundillinois.com/gai.htm?mt=aadt>

The table below reflects the data from IDOT's available Annual Average Daily Traffic (AADT) volume.

	Harlem Ave North Leg	Harlem Ave South Leg	22nd St East Leg	22nd St West Leg
2006			26,600	29,900
2007	36,300	33,700

TRAFFIC SIGNALS-NO INSPECTION-MAINTENANCE TRANSFER

County: Cook

Section: _____

Route: _____

Contract No.: _____

Job Number: _____

Project No.: _____

Permit No.: 1-T-11-0008

The maintenance responsibilities for the traffic signal installation at the subject intersection was transferred.

A preconstruction maintenance inspection was not conducted. The contractor commenced work on this contract (Permit) prior to requesting a preconstruction maintenance inspection, or transferred maintenance of the existing traffic signal with a phone call to the area signal engineer, therefore, automatically accepting full maintenance of the signal installation. The contractor shall provide full maintenance responsibilities until all contract work is completed, inspected, and accepted. The contractor will be required to make all repairs to any damaged equipment as itemized on the inspection "punch list" report, at no cost to the Department of Transportation, before maintenance transfer back to the Department, or its Electrical Maintenance Contractor, will be permitted.

The signals will be maintained by Meade Electric effective 02/23/11.

TRAFFIC SIGNALS – INSPECTION – NON-ACCEPTANCE

County:	<u>Cook</u>	New Signal	<input type="checkbox"/>
Section:	_____	Temporary Signal	<input type="checkbox"/>
Route:	_____	Signal Modification	<input checked="" type="checkbox"/>
Contract No.:	_____	Detection Loop Replacement	<input type="checkbox"/>
Job Number:	_____	Emergency Vehicle Preemption	<input type="checkbox"/>
Project No.:	_____	Flashing Signal Installation	<input type="checkbox"/>
Permit No.:	<u>1-T-14-0016</u>	Bridge Signal	<input type="checkbox"/>

The traffic signal installation at the subject was inspected on October 24, 2014 and the following deficiencies noted:

Missing sidewalk section by NW corner RLR handhole. Replace per plan. See plans for approximate sidewalk replacement quantities.

Missing sidewalk section by NE corner RLR service handhole.

Sidewalk near NE corner removed concrete section has numerous cracks. Remove and replace sidewalk per plan including cracked sections.

Submit confirmation from the Village regarding change in permit scope of work due to gas line conflict or revised plans for EB RLR installation.

Submitted record drawings are not accurate. Accurate record drawings will need to be submitted once confirmation from the Village is available.

The signals will be maintained by Meade Electric Const. until the deficiencies are corrected and reinspected by IDOT and the Department's Electrical Maintenance Contractor.
