Nothing in any special provision or any supplemental specification shall be construed as eliminating or superseding the requirements of this section.

C. **SPECIFICATIONS**

It has been noted that the friable 2’x4’ white suspended ceiling tiles in the basement, which tested positive for asbestos, have deteriorated and fallen into standing water. The water and deteriorated ceiling tiles are scattered across the basement floor. All materials and debris that have been impacted by the deteriorated ceiling tiles and the asbestos-impacted water in the basement should be handled as asbestos contaminated waste. The asbestos-impacted water remaining in the basement should be considered as ACM contaminated and properly handled prior to demolition of the building or prior to discharge of the water into a sanitary wastewater system. During abatement prior to demolition, cleanable items or materials that can be decontaminated from the asbestos impact may be able to be removed and disposed of as non-ACM waste after the materials are decontaminated and in accordance with all applicable laws.
